PRODUCT OVERVIEW

AIRFLOW REGULATION

RVP-P

RVP-P ensures volume flow control regulation by a given set-point. Set-point can be given as air volume flow or overpressure/underpressure. Parametrization is carried out in the factory in accordance with clients request. Advantages of variable air volume dampers are high regulation precision and no maintainance required.

DESCRIPTION

VAV dampers are used to control a variable or constant airflow volume in duct ventilation systems. All VAV dampers are equipped with compact VAV actuator, which has in-built pressure differential sensor and PID logic control. Actuator sensor is connected with rubber hoses to the measuring cross which is used for measuring the duct airflow. By having a real time information about the volume airflow in the duct, VAV's can dynamically respond to the changes in the setpoint (temperature, CO2 or humidity) and ensure optimized ventilation with lowest possible energy consumption.

MATERIALS

Casing and damper blade of the VAV damper are produced out of galvanized steel sheet. Sealing gaskets are produced out of EPDM rubber, and measuring cross is made out of aluminium tubes. On special demand, VAV casing can be produced out of stainless steel sheet EN 1.4301/EN 1.4404 (AISI 304/316L), and can also be powdercoated to any standard RAL chart colour.

TESTS AND CERTIFICATES

All our dampers are submitted to a number of tests by official test institutes. Reports of these tests form the basis for the approvals of our dampers. Klimaoprema VAV dampers are also suitable for installation in buildings with high hygienic demands such as hospitals, clinics and pharmaceutical areas.

To confirm this, our products are tested by an independent Institute of Hygiene, based in Gelsenkirchen, Ruhr, and comply with directives and guidelines in VDI 6022.

For more information about certificates, visit our website www.klimaoprema.com

Declaration of incorporation:

www.klimaoprema.com/rvp-p/doi

TECHNICAL DATA

VAV damper casing is manufactured from galvanized steel sheet, but on demand can be produced out of:

- Galvanized steel and powder coated
- Stainless steel EN 1.4301/EN 1.4404 (AISI 304/316L)
- Stainless steel EN 1.4301/EN 1.4404 (AISI 304/316L) and powder coated

VAV damper for areas with potentially explosive atmospheres are also available!

Nominal sizes RVP-P	200 x 100 - 1000 x 1000 [mm]
Casing length	350 mm
Temperature range	0 °C ... 50 °C
Volume flow rate range	up to 36000 m³/h
Differential pressure range	up to 1000 Pa
Casing air leakage	Class C, EN 1751
Closed blade air leakage	Class 0/3, EN 1751
Upstream velocity	< 12 m/s
EC conformity	EN ISO 12100:2010
Declaration of incorporation	Doi 429/2020_03

MODELS

VAV dampers with compact controllers

These regulators are equipped with compact VAV controllers which include actuator, controller and dynamic pressure sensor in the same device. VAV units are called pressure independent when the air flow rate passing through it is maintained constant regardless of variations in the system supply pressure. This level of control is possible with the addition of airflow sensor (measuring cross) and variable air controller that maintains the airflow according to required set-point. The controller is measuring the airflow through the device and modulates the damper blade angle in response to system disturbances. The preset volume can be varied between calibrated airflow limits (Vmin, Vmax) via input control signal (analog, communication protocol) provided by room thermostat or HVAC BMS system.

PRODUCT OVERVIEW

AIRFLOW REGULATION

Pressure independent regulation ensures economical distribution of air volume to the ventilated spaces according to the individual space requirements. A wide range of actuators are available with VAV dampers (Belimo, Gruner and Siemens), and a wide range of communication protocols are supported by them (MPBus, KNX, ModBus, Bacnet).

Dynamic pressure sensors have operating range 0..600Pa, with ±1Pa resolution. Maximum operating duct pressure is 1000Pa. Casing can also be additionally insulated with 30mm of mineral wool and double skin galvanized sheet casing for reduction of the casing radiated noise. The damper blade and the connection sleeves are equipped with rubber gaskets.

ATEX rated version is available and equipped with EX rated Schischek actuators and controllers.

Standard airtightness class C0, on request C3!

Controllers

Analogue communication

Compact VAV controllers controled via 0(2)..10V analogue signal. All actuators are equipped with feedback signal for common functions like actual flow, pressure drop or damper blade angle.

MP-Bus communication

MP-Bus is a simple sensor/actuator bus, which is used for certain sub-systems of building automation systems. MP-Bus uses a master/slave bus technology where defined number of slave units can be connected to an MP-Master unit.

Communication protocols

Compact controllers are also available with support for most common communication protocols: ModBus, Bacnet and KNX. Communication protocols enable connection of much larger number of units to a common communication network. Network is controled by a building management system (BMS) controller.

Schischek EX (see page 10.)

ATEX rated VAV dampers are equipped with Schischek ExMax actuators and ExReg volumetric/pressure controllers. Optionally, casing can be produced in EN 1.4301/EN 1.4404 (AISI 304/316L) stainless steel.

PRODUCT OVERVIEW

AIRFLOW REGULATION

DESCRIPTION

VAV units for potentially explosive atmospheres are equipped with Schischek ExMax spring return actuators (1) and ExReg-V VAV controllers (2). ExReg-V controllers can be parametered on-site using menu navigation, without any electronic aids. The internal PID control structure is easy to use and can be configured fully automatically for standard applications. The display indicated the current status for actual value, setpoint value and control variable during operation.

Type Examination Certificate Number: FIDI 21 ATEX D060. Equipment complies with the essential health and safety requirements relating to the design and construction of equipment intended to use in potentially explosive atmospheres given in annex VIII of the directive ATEX 2014/34/EU.

MATERIALS

Casing and damper blade of the VAV damper are produced out of galvanized steel sheet. Sealing gaskets are produced out of EPDM rubber, and measuring cross is made out of aluminium tubes. On special demand, VAV casing can be produced out of stainless steel sheet EN 1.4301/EN 1.4404 (AISI 304/316L), and can also be powdercoated to any standard RAL chart colour.

PRODUCT OVERVIEW

VAV universal components

- A

VOLUMETRIC FLOW CONTROL

Standard VAV casing equipped with VRU-D3-BAC controller/pressure sensor and standard modulating, fast-acting or spring return actuator. Casing is equipped with measuring cross for airflow measurement and control in the duct.
- B

DUCT PRESSURE CONTROL

Damper casing without measuring cross, equipped with duct pressure controller and static sensor VRU-M1-BAC. Static pressure probe is installed on the duct, and static pressure is maintained inside the duct.
- C

ROOM PRESSURE CONTROL

Damper casing without measuring cross, equipped with duct pressure controller and static sensor VRU-M1R-BAC. Static pressure probe is installed in the room and in the reference area. Static overpressure or underpressure is maintained in the room.

VARIANTS

VAV universal components

VAV components offer modular product range capable of volumetric or pressure control in duct or rooms.

Two types of sensors are available, D3 dynamic sensor and M1 diaphragm static pressure sensor. D3 sensor is used in relatively clean ventilation systems whereas diaphragm sensor is used for polluted air systems.

Multiple casing options are therefore available to provide a basis for components and actuators.

There are four types of casings that can be ordered:

- WA - RVP casing with measuring cross and damper blade without actuator
- WMC - RVP casing without measuring cross and actuator but with damper blade
- MC - casing with measuring cross
- OC - RVP casing only

Three different sensor and controller types are available:

- VRU-D3-BAC - duct pressure/volume controller with dynamic D3 pressure sensor
- VRU-M1-BAC - duct pressure/volume controller with M1 static pressure sensor for duct pressure control
- VRU-M1R-BAC - pressure controller with M1 static pressure sensor for room pressure control

There types of actuators are available:

- Standard modulating actuator
- Fast acting modulating actuator
- Spring return modulating actuator

Integrated NFC interface for simple commissioning and configuration with a smartphone using the Belimo Assistant App

INSTALLATION

The volume control accuracy depends on flow conditions before measuring cross. Other regulating elements may cause turbulence and may affect the measurement. For that reason, when installing damper after a damper, it is necessary to ensure long enough straight section of the duct. Recommendations for the length of the straight section of the duct:

- Damper - 4 x B

Note: All duct fittings (eg. connections, branches etc) should comply with EN 1505.

Installation space is required and should be reserved for installation and maintenance of the VAV dampers. It is necessary to provide access to the inspection openings. Standard RVP-P units come pre-calibrated from the factory. Standard calibration implies V_{nom} values that are equivalent to air duct velocity of 12 m/s. V_{max} and V_{min} values can be found in the table on [page 2](#). V_{min} value can be calibrated in a range from 10% of V_{nom} . V_{max} can be calibrated in the range between

V_{min} and V_{nom} . Input signal regulates the volume flow between V_{min} and V_{max} linearly. Below V_{min} , the volume flow cannot be regulated.

If the dampers are installed according to the recommendations, airflow control accuracy depends on the airflow velocity in the duct.

- for velocities > 3 m/s accuracy is declared to $\pm 5\%$
- for velocities between 1,2 m/s and 3 m/s accuracy is declared to $\pm 10\%$
- for velocities < 1,2 m/s accuracy is declared to $\pm 20\%$

Compact VAV actuators with integrated dynamic pressure sensors are intended for use in ventilation systems with relatively clean air. That means that the ventilation systems should not contain abrasive, chemical or adhesive particles. Temperature range in the place of installation is permitted to 0 °C to 50 °C. For regulation in areas with contaminated media, units with static pressure sensors are used (VRU-M1-BAC and VRU-M1R-BAC). These controllers can be calibrated to regulate airflow or pressure in the duct or room.

Control

Pressure independent VAV's have the following control parameters: V_{min} (minimum airflow), V_{max} (maximum airflow) and V_{nom} (nominal airflow). These parameters are defining the volume airflow range in which the VAV is operating. Nominal airflow range depends on the size of the damper, and is equal to the corresponding duct air velocity of 12 m/s.

V_{min} can be set to any volume airflow between 10% V_{nom} and 100% V_{nom} , and V_{max} can be set to any volume airflow between V_{min} and V_{nom} . The control of the dampers is done via analog signal (0(2)-10V) or some of the supported communication protocols. Most commonly a BMS system is controlling the ventilation system (including the VAV's), but it is possible for the VAV's to work independently with a simple room controller providing it with the needed setpoint.

Except stand-alone operation, VAV's can work in parallel operation and master/slave operation. In parallel operation control signals are always the same, and control parameters V_{min}/V_{max} can be set independently. In master/slave operation the actual signal from the master unit is controlling the reference air volume in the slave unit. Actuators are overload proof. Compact, standard and high speed actuators will remain at their last position in the event of power shutdown. Spring return actuators will completely close or open the damper, depending on their installation orientation.

Parametrization is made in the factory according to the customer demands or default settings. Subsequently changes to the parametrization can be made on site with ZTH tool or Belimo assistant app.

Belimo motor drive

- motor drives : Belimo (MP, ModBus/Bacnet, MF, KNX)
- power supply - AC 24V, 50/60 Hz
- DC 24V
- diagnostic socket for service and PC-Tool software

Accessories

PZX

PZX unit is an additional silencer for reduction of the air regenerated sound power levels. It is specifically designed for use with RVP-P variable air volume dampers, with 500mm of free space for unaffected operation of RVP-P. Absorption material is non combustable mineral wool. Mineral wool is covered with glass fibre voal to prevent erosion of the particles inside the duct.

BELIMO Parametrization

Adjustment device ZTH-EU and NFC for VAV terminal units with Belimo volume flow controllers, used to facilitate service and commissioning.

PARAMETRIZATION

BELIMO NFC

The integrated NFC interface (Near Field Communication) of the VAV-Compact and VAV-Universal controllers allows you to use the system with your own smartphone – for simple and efficient commissioning and configuration – wirelessly with the Belimo Assistant App.

The ZIP-BT-NFC is available for connection via Bluetooth. For configuration at the VAV unit manufacturer (OEM) or during commissioning for bus addressing, both also in a de-energised state. Simple operational check thanks to the graphical trend analysis.

GUIV3-M

GUIV will start via on/off switch. If GUIV is connected to an actuator, the data will be read out and shown in the display. The control panel is used to set various operating modes, override controls and parameter settings. The GUIV features a micro USB. This allows to use the GUIV as an interface converter between WINVAV2 software and actuator or for loading a battery pack.

Instructions

To perform parameterization, it is necessary to connect the drive with the adjustment device GUIV3-M.

The adjustment device contains a circular button and a confirmation button. With circular button you scroll through the main menu and you can change the values (parameters).

Menu points GUIV3-M

1.Act / Set

Shows actual value / setpoint (override function).

2.Min

Adjust the desired min value (setpoint Y = 0 / 2 V DC).

3.Max

Adjust the desired max value (setpoint Y = 10 V DC).

4.Diag

Diagnostic menu:

y/u – shows setpoint / feedback signal

off – return to first level

oP – opens the damper

cL – closes the damper

Hi – activates max. value

Lo – activates min. value

bE – activates between value

St – diagnostic mode on, motor off

Adp – adaption drive (only 15 Nm or Modbus version)

123 – software version

5.Mode

0An (0-10 VDC | normal direction of rotation) 2An (2-10

VDC |normal direction of rotation)

2Ai (0-10 VDC | inverse direction of rotation) 2Ai (2-10 VDC | inverse direction of rotation)

6.Com

Setting the Modbus address (1...247) and communication parameters (if Modbus version).

7.Nom

Volumetric air flow: Shows & setting the nominal value depending on the VAV-Box

Pressure: Setting the correction factor

Settings

327 VAV actuators can be set directly on the display. All 327

VAV actuators can communicate via service connector with

setting tool GUIV3-M or with setting software WIN-VAV2.

GUIV3-S is used as an interface for setting software WIN-VAV2.

Accessories

GUIV3-M – service connector + handheld tool GUIV3-M

TRANSPORT

After arrival, check the VAV damper for transport damage and shortcomings. In case of any damage or shortcomings, immediately contact your supplier.

STORAGE

If the damper is not installed immediately:

- Remove any wrapping.
- Protect fire damper from dust and contamination.
- Do not expose the VAV damper to the effects of weather - store the damper in a dry place.
- Do not store the unit below -20 °C or above 50 °C.

Please properly dispose of packaging material!

MAINTENANCE AND OPERATION

Klimaoprema VAV dampers are designed with fully enclosed drive mechanism outside of the duct and as such do not require cleaning and regular maintenance.

However, activation mechanism should be inspected for proper operation on regular basis.

- Provide at least one annual check of the damper
- After each intervention, provide a systematic cleaning of dust and especially the solenoid and its movable plate
- Check the if the electrical terminals are tightened
- Cleaning instruction: clean with a sponge, with water or a mild detergent
- Disinfection instruction: spray disinfectant (disinfectant may contain alcohol which is flammable, take precaution to avoid ignition)

It is not permitted to alter the dampers in any way nor perform any changes to their structure (except for the service procedures described in this manual) without the manufacturer's consent.

Provide at least one annual check of the damper. The functional test must be carried out in compliance with the basic maintenance principles of the European norms EN 13306, EN 15423 and EN15650.

COMMISSIONING

- Carefully unpack RVP-P - be careful of sharp edges and do not use excessive force for unpacking
- Inspect the product - check the volume flow damper for damage
- Installation of the volume flow damper - according to the installation instructions ([page 13.](#))
- Before commissioning: check the product functions

FUNCTIONS

Electric actuator: Signal testing - the damper blade must close/open
