

CULTRA STUDIOLINE

Room air conditioning module

OPERATING CONDITIONS

- Operating liquid: water / water-glycol mixture
- Max. operating pressure in the battery: 8 bar
- Max. air outlet temperature: 40 °C
- Maximum relative humidity in the environment: 60%
- Power supply: 230 V AC 50/60 Hz
- Control voltage: 0...10 V DC signal

PERFORMANCE DATA

Size =	CSL-1-L4	CSL-2-L4	CSL-3-L4	
	V _L = 587	777	904	m ³ /h
	L _{WA} = 40	39	40	dB(A)
	W = 48	47	51	W
	Q = 2,93	4,06	5,17	kW
	Q _T = 3,45	4,59	5,82	kW
	Q _S = 2,59	3,45	4,28	kW

Heating: t_{w1} = 65 °C, t_{w2} = 55 °C, t_r = 20 °C

Cooling: t_{w1} = 7 °C, t_{w2} = 12 °C, t_r = 27 °C, HR = 47 %

Technical data according to (EU) 2016/2281 for 4-pipe design with clean filter at maximum speed.

ADVANTAGES

- Flexible mounting and installation possibilities
- High cooling and heating capacities
- Control technology adapted to any demand
- Low noise generation
- Energy-efficient, decentralised air-conditioning
- Low power consumption
- Easy installation (connection prepared)
- Convenient and fast maintenance through removable inspection cover and filter with clip system.
- Concealed mounting is possible, without loosing useable surface area
- Efficient EC motors with continuous control 0...10 V

INTENDED USE

Intended use as fan coil unit according to Commission Regulation (EU) 2016/2281 of 30 November 2016.

GENERAL DESCRIPTION

The room air-conditioning module Cultra Studioline can be positioned either in front of the wall or integrated in the wall, thus preventing costly waste of office space. The dimensions of the room air-conditioning module permit installation into walls, ceilings or floors. Later in-front-of-the-wall installation is also possible.

For integration of the room air-conditioning module in the wall, sliding connection spigots are required in order to connect the air intake and outflow grilles to the module (at an extra charge). This architectural flexibility allows an absolutely free use of space.

The room air-conditioning module Cultra Studioline is a decentralised recirculating air cooling device for offices and medical practices. It's also particularly suitable for sound studios, as it satisfies the requirements of GK 15 in combination with room-side sound measures according to DIN 15 996.

The plug-in room air-conditioning module allows for a cost-efficient and quick installation. In case of changes of room utilization or rebuilding of wall tiles, a quick moving of the room air conditioning module is possible. The user can take the room air-conditioning module with him when he is moving, just like normal office furniture.

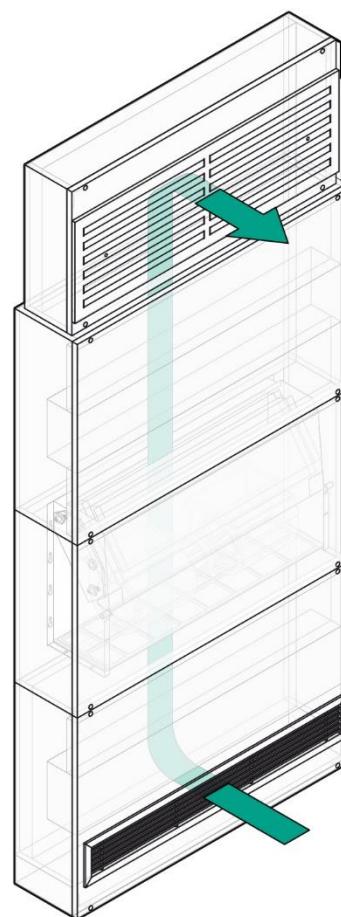

Its sensible cooling power is up to 4000 W and the air volume is up to 900 m³/h. For larger rooms, several modules can be used. The device is available in 2-pipe or 4-pipe design. The operating point of the device can be controlled continuously with a 0...10 V signal.

For maintenance purposes, the central cover can be removed. The register and the fan are easy accessible without special tools. The built-in filter is directly attached to the integrated fan convector and can be easily exchanged thanks to the clip fastening.

As a standard feature, the room air-conditioning module CULTRA-Studioline is equipped with an air intake grille type PA-01 and an air outflow grille type DBB. The wide range of SCHAKO supply air and return air diffusers offers a wide scope for the design of the device.

OPERATION

Room air is drawn in through the air intake grille and cleaned by the built-in filter. The integrated reverse silencer reduces the flow generated noise. The air is then taken through the cooling or heating register and is temperature-controlled. A further deflection sound absorber is connected downstream for noise reduction. The temperature-controlled air is then blown out into the room again through the air intake grille. The room air-conditioning module can be operated with circulating and/or fresh air (at an extra charge).

DEVICE DESCRIPTION

1 Housing

--- Galvanised sheet steel without paint.

2 Secondary air grille type PA-01

--- Extruded anodised aluminium profiles painted to RAL 9010 (white).

3 Supply air diffuser type DBB

--- Faceplate made of sheet steel painted to RAL 9010 (white) with plastic blades, similar to RAL colour 9010 (white).

4 Aquaris Silent

--- 4.1 Heat exchanger

- The heat exchanger unit can consist of a single register with 3 rows for cooling and heating operation (for connection to a 2-pipe system) or of two registers with 3+1 rows of pipes (for connection to a 4-pipe system).
- The registers consist of copper pipes, aluminium ribs, a manual ventilation and drainage system as well as a frame made of galvanised sheet steel.
- The register length depends on the size of the device.

--- 4.2 Motorised fan

- The motorised fan consists of double-sided, intake-operated, dynamically balanced, centrifugal blowers with forward directed blades and direct actuator.
- Highly efficient EC motors equipped with a maintenance-free ball bearing for a long service life.
- The EC fan can be activated by 0...10 V and is almost infinitely variable.

--- 4.3 Filter

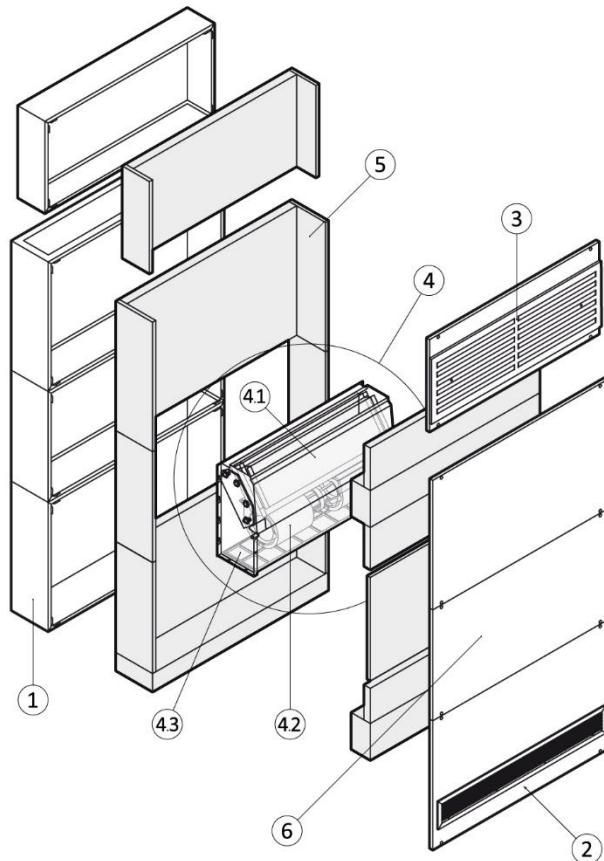

- Efficiency ISO coarse < 40% according to ISO 16890.
- Filter with synthetic filter medium in a plastic frame.
- Thanks to the holding clips, the filters can be dismounted without using tools.

5 Inner insulation

--- Insulation material, building material class B1: not easily flammable.

6 Inspection cover

--- Galvanised sheet steel.

MODELS

CS...	Room air conditioning module
{-1, -2, -3}	Size
{-R1, -R3, -L4}	System and rows of pipes
{2500... 3000}	Total height
{-VR, -HO}	Mounting position
{-Wx}	Water connection position
{-Sx}	Electric connection position
{-Kx}	Condensate connection position

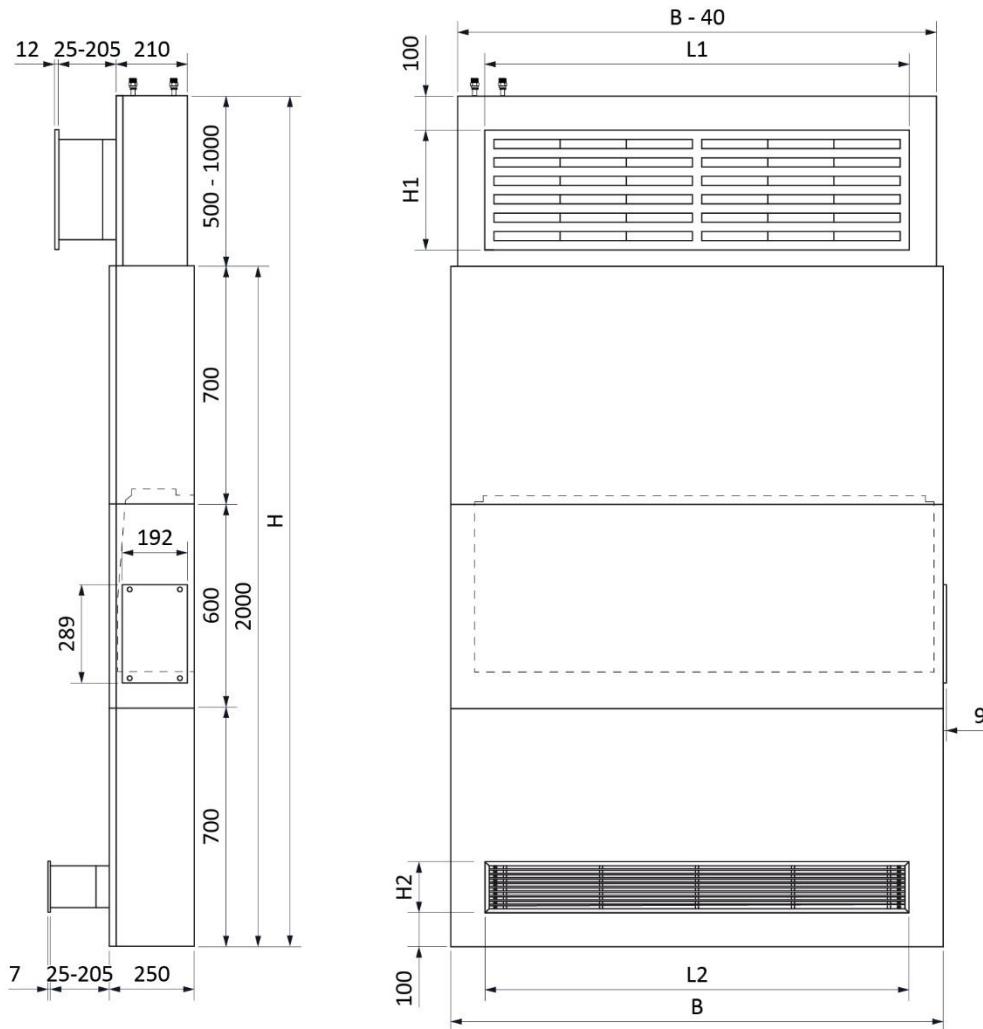

OPTIONS

- Housing painted to different RAL colours.
- Adjusting legs.
- Diffusers, colour design in different RAL colours.
- Diffusers with frame for flush-mounted installation.
- Primary air connection spigot.
- Valves and actuators for hydraulic regulation.
- Additional control and regulation elements.
- Condensate pump.

ACCESSORIES

- Hydraulic regulation.
- 6-way ball valve and rotary drives.
- Room thermostat.

MODELS, DIMENSIONS AND WEIGHTS

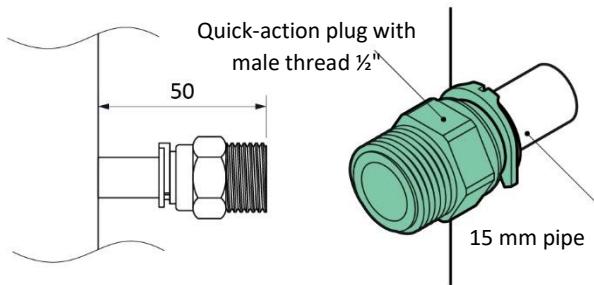

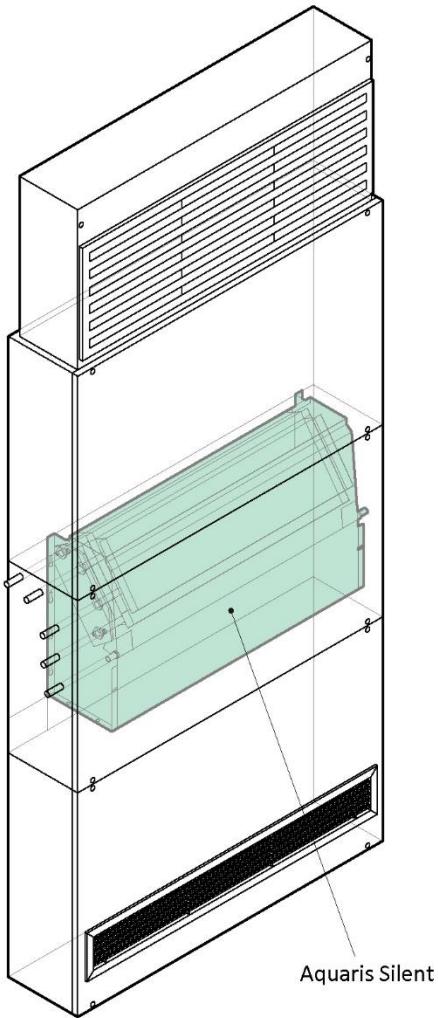

Size	Cultra Studioline		Dimensions (mm)				Weight (kg)
			L1	H1	L2	H2	
1	B 900	H 2500 < H < 3000	650	352	648	252	74
2			1050	352	1048	152	91
3			1250	352	1248	152	110

HOUSING COLOUR

- 0 = housing unpainted (standard)
- 1 = black housing, painted to RAL 9005
- 2 = white housing, painted to RAL 9010
- 3 = white housing, painted to RAL 9016
- 4 = grey housing, painted to RAL 9006
- Further colours are available upon request

HEAT EXCHANGER

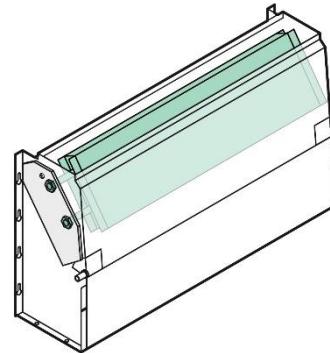

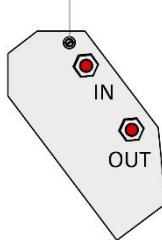

NOTE

To prevent deposits and corrosion, the quality of the water for filling the registers must comply with the regulations of VDI 2035 and DIN 50930.

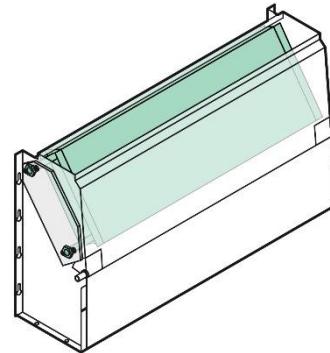

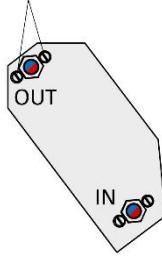

R1 = 2-pipe register 1 row of pipes (heating)

Ventilation valve

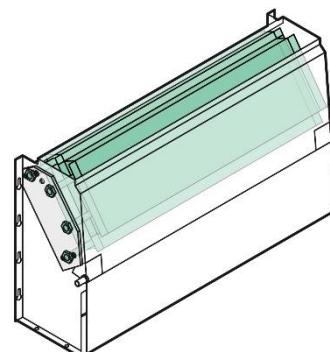

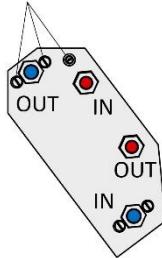

R3 = 2-pipe register 3 rows of pipes (cooling or heating) (standard)

Ventilation valve

L4 = 4-pipe register 1 and 3 pipe rows (cooling and heating)

Ventilation valve

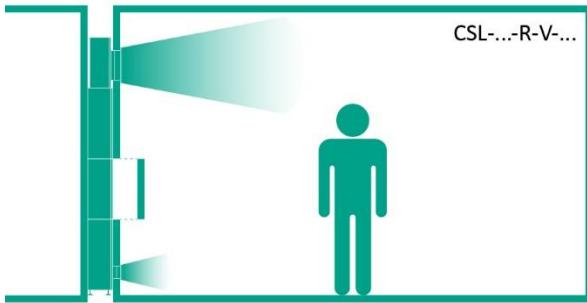

NOTE

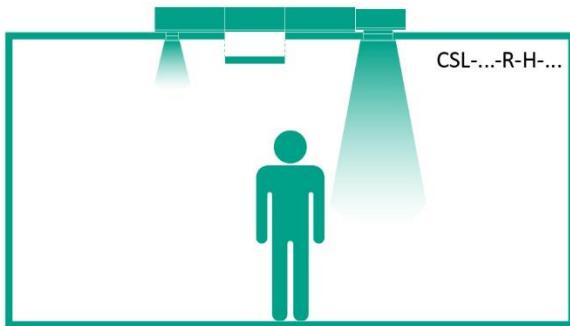

The registers are equipped ex works with a manual bleed valve. Use the air vents always in top position

INSTALLATION POSITION

VR = mounting type vertical, secondary air grille and inspection in the room (standard)

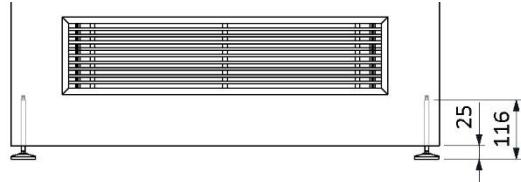

H0 = mounting type horizontal in the ceiling (not compatible with adjusting legs)

ADJUSTING LEGS

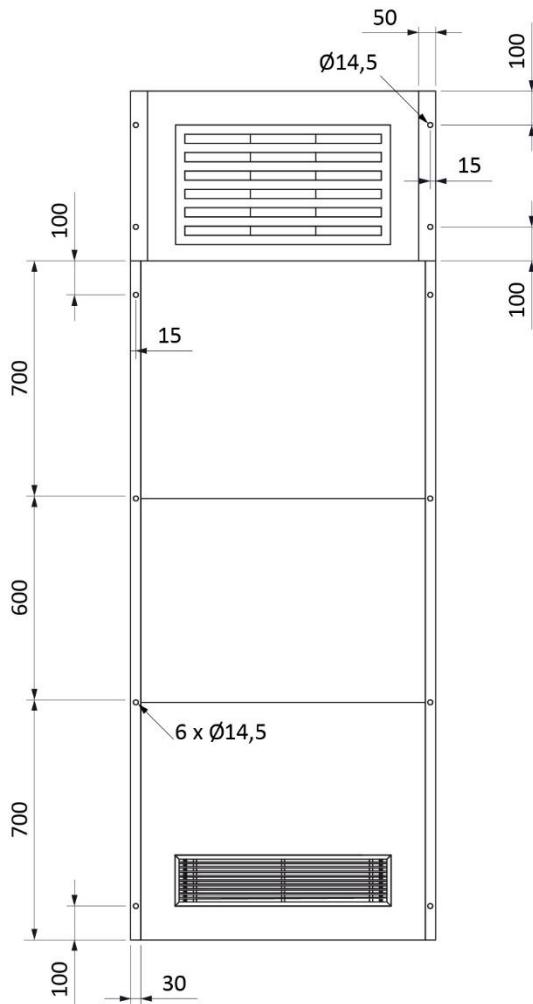

0 = without adjusting legs (standard)

1 = with adjusting legs (not compatible with horizontal mounting)

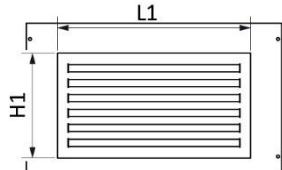

NOTE

Installation position -H0 with mounting bracket:

SUPPLY AIR DIFFUSER

D1 = DBB-A

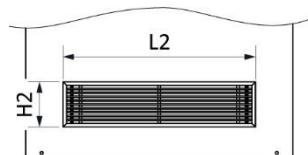

Size	L1 x H1 (mm)		
	CSL-1	CSL-2	CSL-3
DBB-A	650 x 352	1050 x 352	1250 x 352

--- --- Further air diffusers are available upon request

SECONDARY AIR GRILLE

R1 = PAZ

Size	L2 x H2 (mm)		
	CSL-1	CSL-2	CSL-3
PAZ	648 x 252	1048 x 152	1248 x 152

--- --- Further air diffusers are available upon request

COLOUR OF THE AIR DIFFUSERS

22 = RAL 9010 (white)(standard)

xy = faceplate/frame colour x, blade/nozzle colour y
(for x, y, see table)

--- Further colours are available upon request

Faceplate | Frame | Blade PAZ:

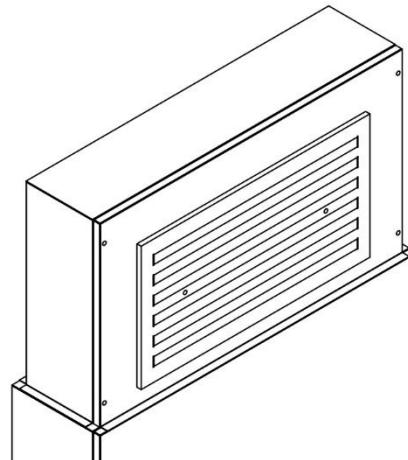

x	Colour
0	unpainted
1	Black RAL 9005
2	White RAL 9010
3	White RAL 9016
4	Grey RAL 9006

DBB blade:

y	Colour
1	Colour similar to RAL 9005 (black)
2	Colour similar to RAL 9010 (white)

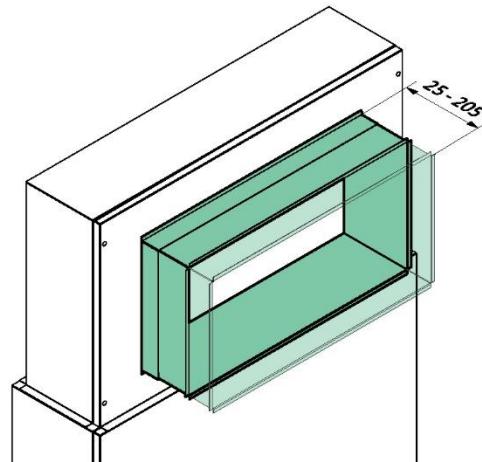

SLIDING CONNECTION SPIGOT FOR AIR DIFFUSERS

M0 = without sliding connection spigot (air diffusers in the device) (standard)

M1 = with sliding connection spigot, adjusting range: 25 to 105 mm

M2 = with sliding connection spigot, adjusting range: 75 to 205 mm

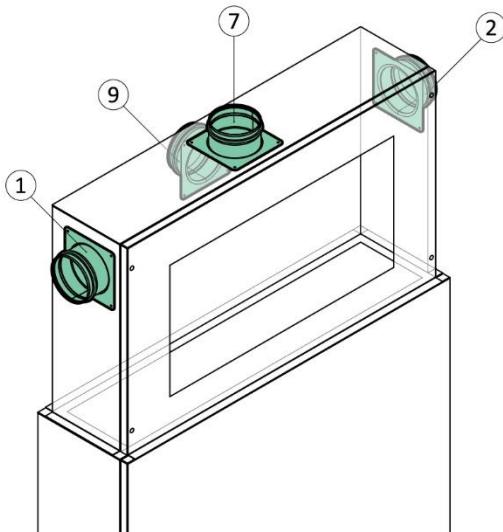

AIR CONNECTIONS

PRIMARY AIR CONNECTION SPIGOT

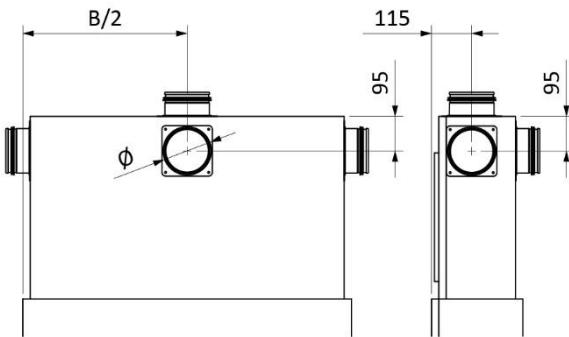

- P0** = without primary air connection spigot (standard)
- P1** = primary air connection spigot on the left side of the box (not compatible with water connection position -W1)
- P2** = primary air connection spigot on the right side of the box (not compatible with water connection position -W2)
- P7** = primary air connection spigot on the top centre of the box
- P9** = primary air connection spigot in the centre rear of the box

NOTE

The primary air connection spigot positions are defined based on the inspection cover.

Dimensions

PRIMARY AIR SPIGOT DIAMETER

- 0** = without primary air connection spigot (standard)
- 1** = primary air connection spigot DN78
- 2** = primary air connection spigot DN98
- 3** = primary air connection spigot DN123

NOTE

Feeding of primary air (V_p) in the box of the device reduces the air flow of the fans (V_L).

POSITION OF THE CONNECTIONS

NOTE

Connections are defined based on the inspection cover.

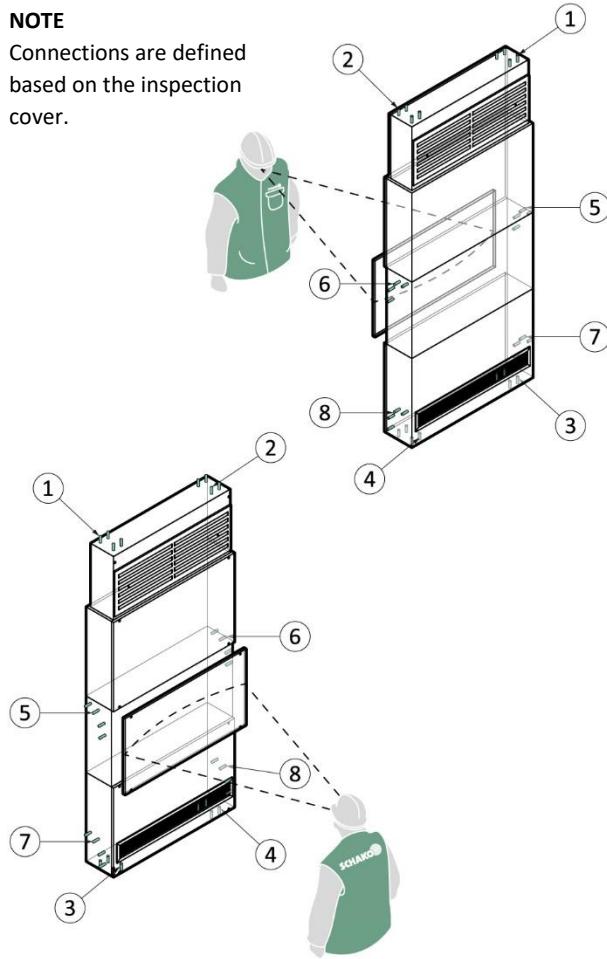

Diagram of 4-pipe design (-L4)

- 1: Top left
- 2: Top right
- 3: Bottom left
- 4: Bottom right
- 5: Centre left side
- 6: Centre right side
- 7: Bottom left side
- 8: Bottom right side

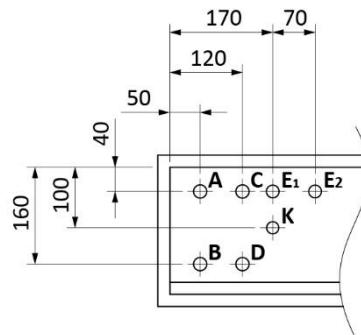

Connection

- A: Cold water outlet
- B: Cold water intake
- C: Hot water intake
- D: Hot water outlet
- K: Condensate connection
- E₁: Electric connection for fan
- E₂: Electric connection for actuators and condensate pump

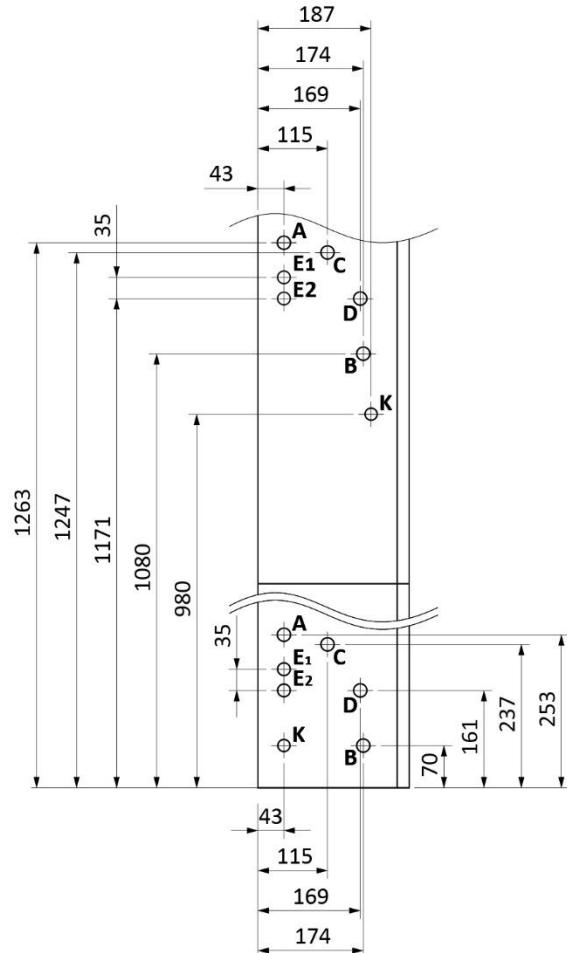

NOTE

Dimensions for left-side connection. The connections on the right side are symmetric.

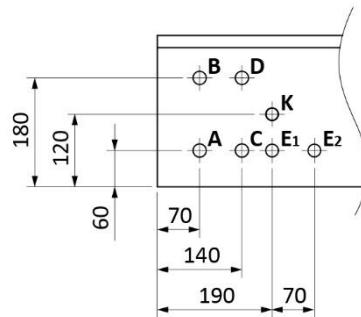

Dimensions of position 1

Dimensions of position 5 and position 7

Dimensions of position 3

WATER CONNECTION

WATER CONNECTION POSITION

- W1** = water connection top left (not compatible with primary air connection spigot position -P1)
- W2** = water connection top right (not compatible with primary air connection spigot position -P2)
- W3** = water connection bottom left
- W4** = water connection bottom right
- W5** = water connection centre left side
- W6** = water connection centre right side
- W7** = water connection bottom left side
- W8** = water connection bottom right side

HYDRAULIC REGULATION

- 000** = on-site mounting (pieces are supplied loose for on-site mounting outside the room air-conditioning module)
- xyz** = cooling valve x, heating valve y, actuators z are mounted ex works (not compatible with valves NW ≥ 1") (for x, y and z, see table)

Pressure independent control valves

x, y	Model	DN	H ₁₀₀ (mm)	Connection (Zool)	V _w min – max (l/h)
1	VPP46.10L0.2	10	2,5	G ½	30 - 200
2	VPP46.10L0.4	10	4,5 5,0	G ½	65 - 333 65 - 370
3	VPP46.15L0.2	15	2,5	G ¾	30 - 200
4	VPP46.15L0.6	15	2,5	G ¾	100 - 575
5	VPP46.20F1.4	20	4,5 5,0	G 1	200 - 1190 220 - 1330

Maximum allowed differential pressure = 600 kPa

Rp = female thread | G = male thread

DN = nominal width | H100 = nominal stroke | VW = water volumetric flow

NOTE

The device is preset ex works to the maximum flow unless otherwise specified.

Actuators

z	Model	Type	Actuator signal	Operating voltage
1	SAST127474	T	ON/OFF - NC	230 V AC 50/60 Hz
2	SAST127475	T	ON/OFF - NC	24 V AC/DC 50/60 Hz
3	SAPV127957	T	DC 0...10 V - NC	24 V AC 50/60 Hz
4	SAPV128561	T	DC 0...10 V - NC	24 V DC
5	SMPV132351	M	DC 0...10 V	24 V AC/DC 50/60 Hz
6	SMPO132353	M	DC 0...10 V	24 V AC/DC 50/60 Hz

T = thermal | M = motorised

ELECTRIC CONNECTION

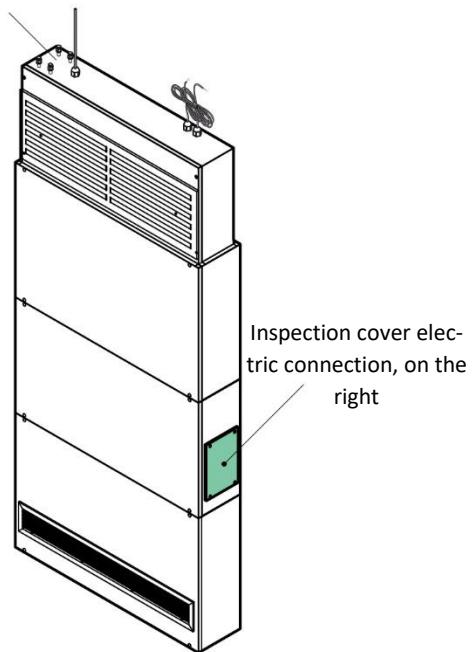

ELECTRIC CONNECTION POSITION

- S1** = electric connection top left
- S2** = electric connection top right
- S3** = electric connection bottom left
- S4** = electric connection bottom right
- S5** = electric connection centre left side
- S6** = electric connection centre right side
- S7** = electric connection bottom left side
- S8** = electric connection bottom right side

NOTE

To facilitate installation and maintenance of the electrical connections, the device is equipped with a tool-free removable inspection cover on the opposite side of the hydraulic connections.

Water connection on the left

ADDITIONAL CONTROL AND REGULATION ELEMENTS

- 0** = without additional control and regulation elements (standard)
- 1** = with fault message output

CONDENSATE DRAIN

CONDENSATE CONNECTION

- K1** = condensate connection top left (with condensate pump only)
- K2** = condensate connection top right (with condensate pump only)
- K3** = condensate connection bottom left (not compatible with a condensate pump)
- K4** = condensate connection bottom right (not compatible with a condensate pump)
- K5** = condensate connection centre left side
- K6** = condensate connection centre right side
- K7** = condensate connection bottom left side (not compatible with a condensate pump)
- K8** = condensate connection bottom right side (not compatible with a condensate pump)

CONDENSATE PUMP

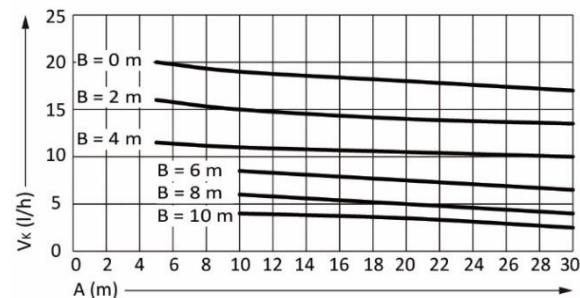

- 0** = without condensate pump (standard)
- 1** = with condensate pump Si-10, mounted ex works

Model	Si-10
Maximum volumetric flow	20 l/h
Maximum delivery height	10 m
Maximum pressure	14 m
Sound level at 1 m	≤ 28 dB(A)
Power supply	230 V AC - 50/60 Hz - 14 W
Float switch	ON: 18 mm OFF: 12 mm ALARM: 21 mm
Safety contact	NC 8 A resistive load-250 V
Thermal protection	115 °C (automatic restart)
Operating cycle	100 % continuous
Protection	IP54
Dimensions	43,5 x 66 x 77 mm

NOTE

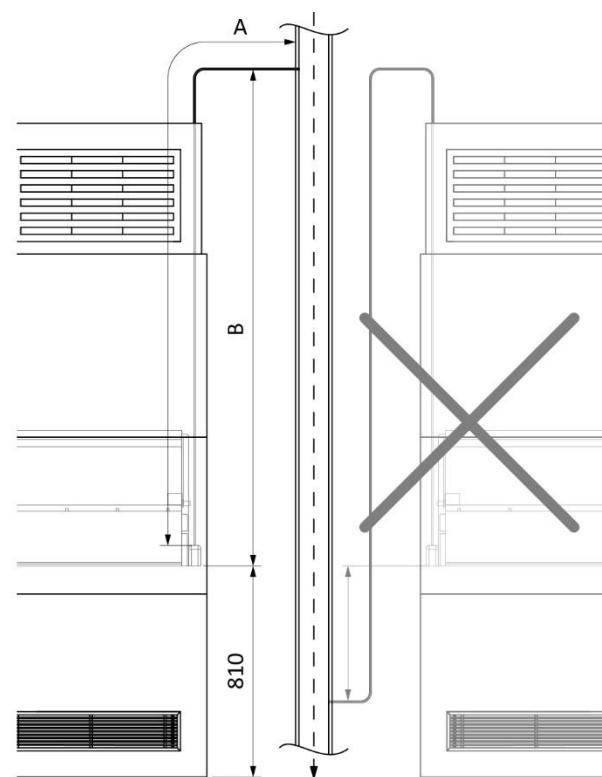

If the condensate pump is not used for a longer period of time, it is recommended to close the drain of the pan to prevent the penetration of dirt.

Functional diagrams

NOTE

The condensate drain must be located above the level of the condensate outlet.

NOTE

The condensate pump is equipped with a potential-free fault message contact NC with a max. switching power of 8 A/250 V resistive load. The contact must be connected in such a way that the cooling system is closed in the event of a fault (open contact).

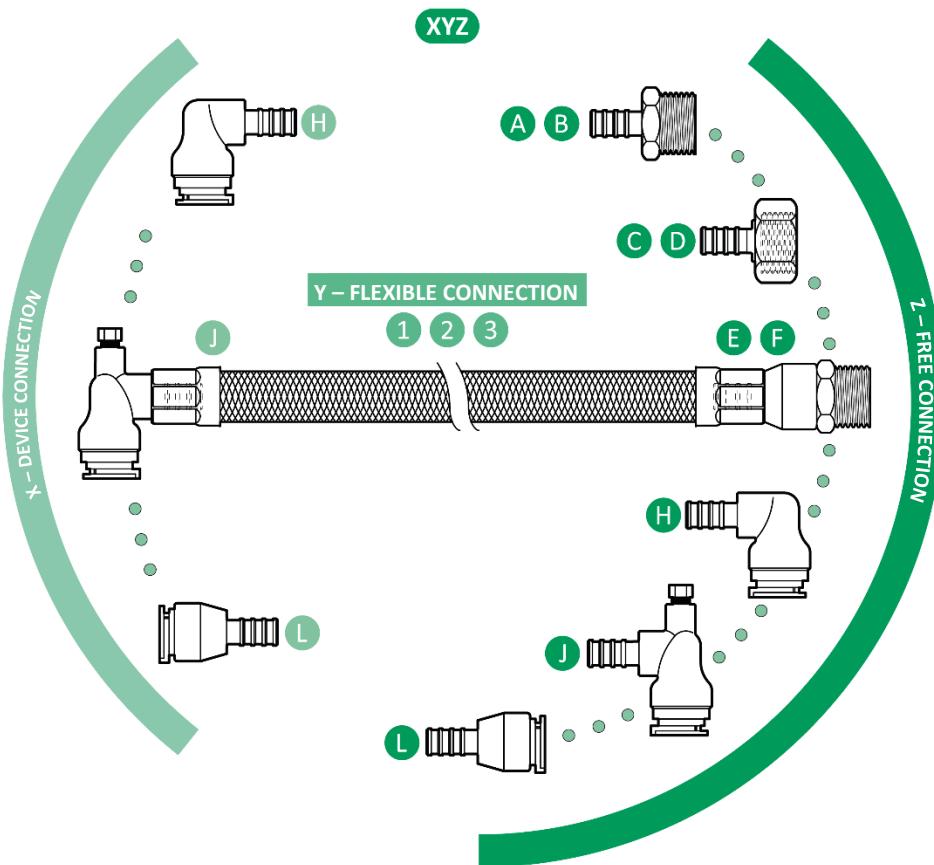

ACCESSORIES

NOTE

All accessories are supplied loose for on-site mounting outside the room air-conditioning module.

HYDRAULIC CONNECTIONS

Hxyz = with device connection (x), flexible connection (y) and free connection to the hydraulic network (z)
 (for x, y, z, see diagram)

x, z	Connection	Type	Connection (mm)	Connection ("")
A	AG	External thread	-	AG ½"
B	AG	External thread	-	AG ¾"
C	ÜMF	Flat seal spigot nut	-	IG ½"
D	ÜMF	Flat seal spigot nut	-	IG ¾"
E	R-AG-D	Rotating male thread	-	AG ½"
F	R-AG-D	Rotating male thread	-	AG ¾"
H	C-RV	Bend plug-in fitting	15	-
J	CE-RV	Bend plug-in fitting with ventilation	15	-
L	RV	Straight connector / plug-in fitting	15	-

y	Flexible connection	Length (mm)	DN (mm)
1	EDE-13	500	13
2	EDE-13	800	13
3	EDE-13	1200	13

Flexible connection according to DIN 4726.

LWZ-HC1A

Construction subject to change.

No return possible.

6-WAY BALL VALVE

- 1°- The water volumetric flow [m^3/h] can be found in the technical data or design program for heating and cooling.
- 2°- Determination of the differential pressure Δp_{v100} above the completely opened valve. Experience shows that a differential pressure of 0.05 to 0.2 bar is sufficient in most systems.
- 3°- Calculation of the volumetric flow k_v [m^3/h]

$$k_v = \frac{V_w}{\sqrt{\Delta p_{v100}}}$$

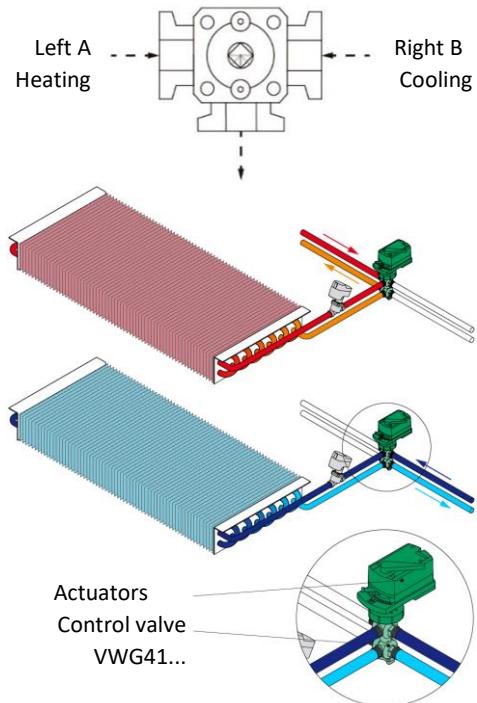

- 4°- Valve selection based on the table

Legend of the table:

- ✓ = nominal value of volumetric flow possible
- = nominal value of volumetric flow not possible
- * = volumetric flow is limited. For DN15 = 1.6 m^3/h , for DN20 = 3.45 m^3/h , for DN25 = 4.0 m^3/h
- DN = nominal width
- K_{vs} = Nominal value of volumetric flow of cold water (5...30 °C) through the fully open ball valve at a differential pressure of 100 kPa 1 bar

ROTARY DRIVE FOR 6-WAY BALL VALVE

Code	Model	Type	Signal
AR01	GDB341.9E	AC 100...240 V ~	2 pos.; switchover

INSTALLATION

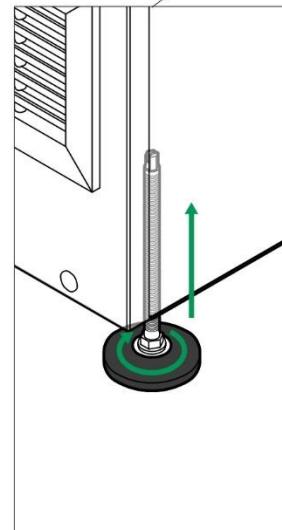

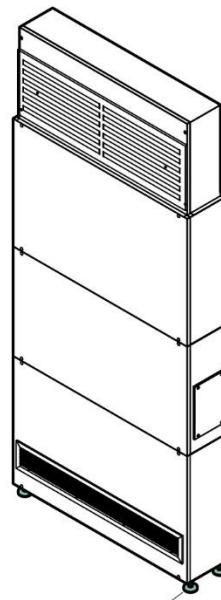

NOTE

To ensure subsequent maintenance work, please ensure that no structural elements block the inspection openings.

Mounting type horizontal with mounting bracket

Mounting type vertical with adjusting legs

NOTE

The legs are M8 for version -1 and M10 for version -2 and -3.

CIRCUIT DIAGRAMS

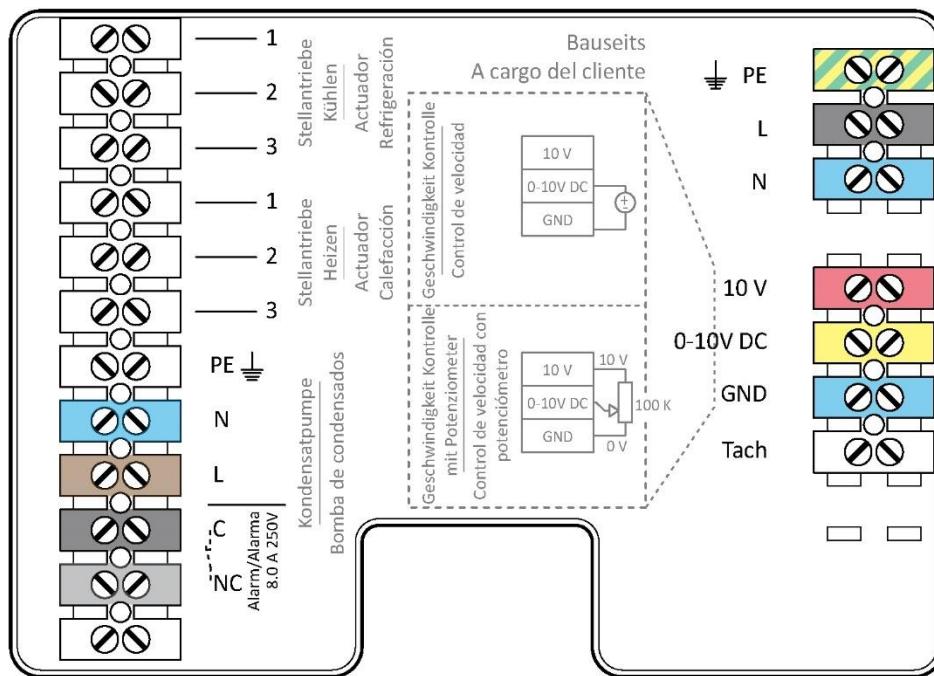

Prior to the electrical installation, you have to make sure that the rated mains voltage is 230 V, 50/60 Hz and single-phase.

The electric connections must be made by qualified electricians only, observing the current regulations and low-voltage regulations.

SCHAKO recommends the exclusive use of copper cables, since the device connections have not been designed for accommodating other types of cables. If they are used nevertheless, galvanic corrosion or generation of heat could take place at the connection point.

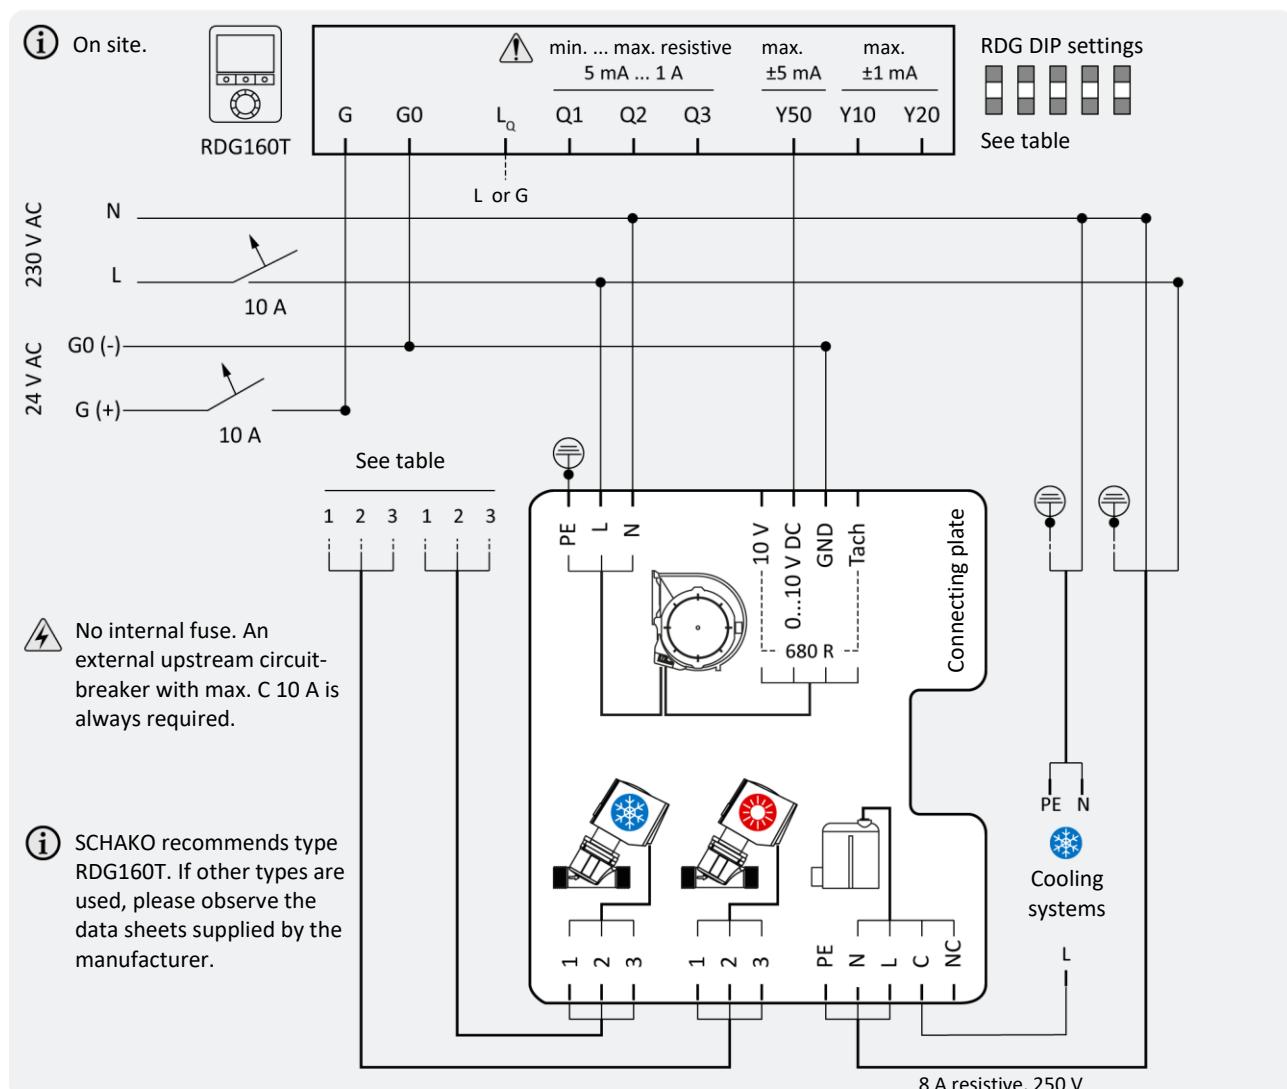

NOTE

Connect the fan convector via an earthing cable. Interrupt the power supply, before carrying out any electrical connection work. SCHAKO cannot be held liable for faulty electric connections or the use of unsuitable cables.

Ref.	Function / assignment	Cable colour
Fan	Protective conductor	Green/yellow
	Power supply 230V AC, 50 to 60 Hz, for the voltage range, see type plate	Black
	Neutral conductor	Blue
	Voltage output 10 V DC 1.1 mA, galvanically separated, short-circuit-proof	Red
	Control input 0- 10 V or PWM, galvanically separated	Yellow
	GND connection of control interface	Blue
	Speed output: Open Collector, 1 impulse per revolution, galv. separated $I_{sink, max.} = 10 \text{ mA}$	White
Actuator	Power supply	Depends on actuator
	Neutral conductor	Depends on actuator
	Regulation	Depends on actuator
Pump	Neutral conductor	Blue
	Power supply	Brown
	Safety contact NC 8 A resistive load – 250V	Black
	Safety contact NC 8 A resistive load – 250V	Grey

MAINTENANCE

Air filter

Filters should be cleaned or replaced regularly. SCHAKO recommends a bimonthly check at high-medium air quality and a monthly check at low air qualities. The filter should be replaced when it is full (dark filter mat).

SCHAKO recommends purchasing replacement filters to avoid prolonged downtimes during maintenance activities.

Heat exchanger

Twice a year, the registers should be checked and, if necessary, cleaned and ventilated. The ribs should also be checked to ensure that there are no leaks.

NOTE

Use the air vents always in top position

Condensate discharge

Twice a year you should check to ensure that there are neither corrosion nor leaks, and the condensate drains should be cleaned.

Motorised fan

Twice a year the fan operation should be checked in the different speeds to ensure that no exceptional noise is generated and that the motor intensity does not exceed the maximum allowed value.

Average values for type -L4.

* L_{WA} is calculated with average values from 125 Hz to 8000 Hz.

EXAMPLE CALCULATION OF THE SOUND PRESSURE LEVEL

Following a simplified example from *AHRI Standard 885*. Other confirmed working methods can be used. You have to select a room air-conditioning module of size 20 with 4 pipes. If a flow of $450 \text{ m}^3/\text{h}$ is required to extract the thermal loads from the project.

The following hypotheses are taken into account:

- Room $6 \times 6 \times 3 \text{ m}$ with 1.5 m distance from the noise source.
- The structure-borne noise transmission is insignificant. It is assumed that the installation has been carried out according to best practice.
- Influences from sources other than those indicated in the example are not considered.
- No environmental correction is applied (*ASHRAE RP755*).
- The insulation of the wall is not taken into account, since extraction and supply air are considered the main noise sources of the device.

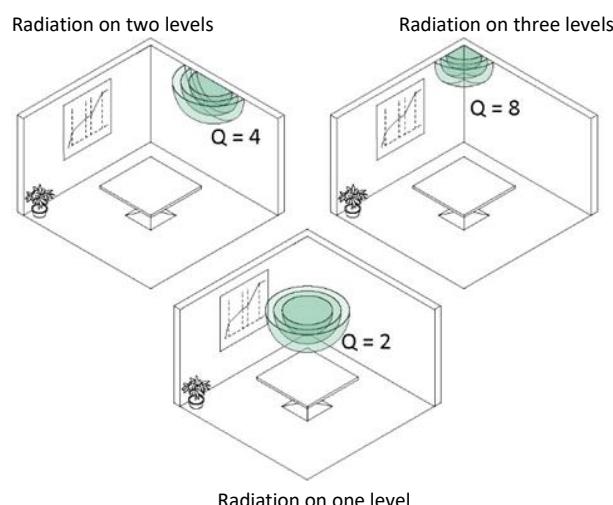

The room insulation can be calculated by the following formula:

$$\Delta L_W = 10 \log \left[\frac{Q}{4\pi r^2} + \frac{4}{R} \right] + 0,5$$

r = distance from noise source (m)
R = direction of noise source = $S \cdot \alpha / (1 - \alpha)$
S = sum of the room surface areas (m^2)
 α = sound absorption coefficient (-) according to sound absorption coefficient (-) according to average values in areas with an approximate reverberation time of 0.5 s *Reynolds, D. Jeffrey M. Bledsoe. 1991.*

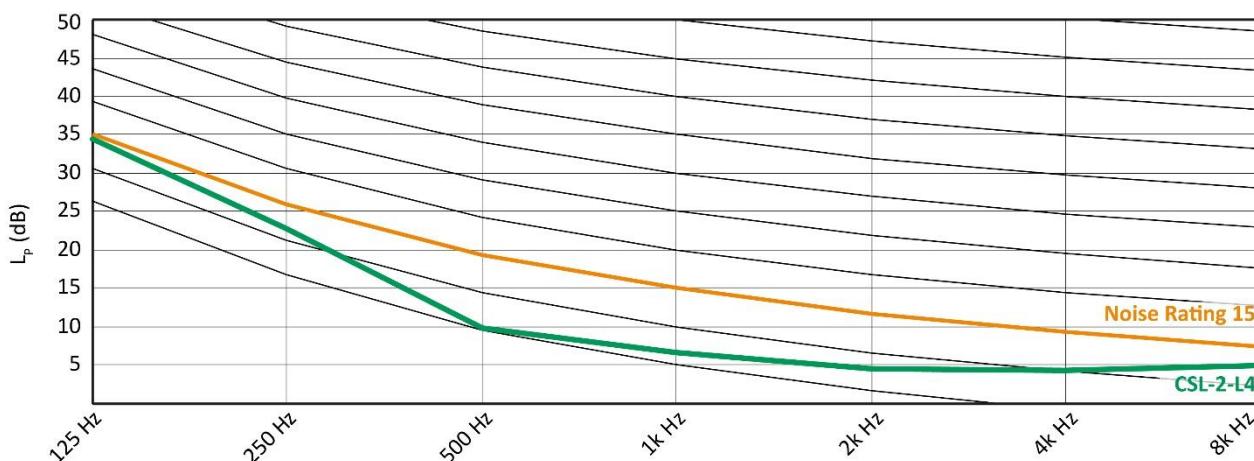

f (Hz)	63	125	250	500	1k	2k	4k	8k
α	0,24	0,22	0,18	0,25	0,30	0,36	0,42	0,42

Q = direction of noise source(-) according to:

CSL-1-R3-2500-0-VR-0-D1-22-R1-22-M0-P0-0-W3-000-S4-0-K3-0

Room air-conditioning module Cultra Studioline | Size 1 | 2-pipe register 3 rows of pipes (cooling or heating) | Total height 2500 mm | Housing unpainted | Mounting type vertical, secondary air grille and inspection in the room | Without adjusting legs | Supply air diffuser DBB-A | Colour of the supply air diffuser: RAL 9010 white, white blades | Secondary air grille PAZ | Colour of the secondary air grille: RAL 9010 white | Without sliding connection spigot (air diffusers in the device) | Without primary air connection spigot | Without primary air connection spigot | Water connection bottom left | On-site mounting (pieces are supplied loose for on-site mounting outside the room air-conditioning module) | Electric connection bottom right | Without additional control and regulation elements | Condensate connection bottom left | Without condensate pump

ORDER DETAILS

01 – Type

CSL = room air-conditioning module Cultra Studioline

02 – Size*

- 1 = Size 1
- 2 = Size 2
- 3 = Size 3

03 – System (water register version)

- R1 = 2-pipe register 1 row of pipes (heating)
- R3 = 2-pipe register 3 rows of pipes (cooling or heating)
(standard)
- L4 = 4-pipe register 1 and 3 pipe rows (cooling and heating)

04 – Total height

- 2500 = total height 2500 mm (standard)
- xxxx = total height xxxx mm (from min. 2000 to max. 3000, always with 4 digits in mm) (< 2500 mm = without adapter piece)

05 – Housing colour

- 0 = housing unpainted (standard)
- 1 = black housing, painted to RAL 9005
- 2 = white housing, painted to RAL 9010
- 3 = white housing, painted to RAL 9016
- 4 = grey housing, painted to RAL 9006

06 – Mounting position

- VR = mounting type vertical, sec. air grille and inspection in the room (standard)
 HO = mounting type horizontal in the ceiling (not compatible with adjusting legs)

07 – Adjusting legs

- 0 = without adjusting legs (standard)
 1 = with adjusting legs (not compatible with horizontal mounting)

08 – Supply air diffuser

- D1 = supply air diffuser DBB-A (standard)

09 – Colour of the supply air diffuser

- 22 = colour of supply air diffuser: RAL 9010 white, white blades (standard)
 xy = faceplate/frame colour x, blade/nozzle colour y (for x, y, see table)

10 – Secondary air grille

- R1 = secondary air grille PAZ (standard)

11 – Colour of the secondary air grille

- 22 = colour of secondary air grille: RAL 9010 white (standard)
 xy = faceplate/frame colour x, blade/nozzle colour y (for x, y, see table)

12 – Sliding connection spigot for supply air diffuser and secondary air grille

- M0 = without sliding connection spigot (air diffusers in the device) (standard)
 M1 = with sliding connection spigot, adjusting range: 25 to 105 mm
 M2 = with sliding connection spigot, adjusting range: 75 to 205 mm

13 – Primary air connection spigot position

- P0 = without primary air connection spigot (standard)
 P1 = primary air connection spigot on the left side of the box (not compatible with water connection position -W1)
 P2 = primary air connection spigot on the right side of the box (not compatible with water connection position -W2)
 P7 = primary air connection spigot on the top centre of the box
 P9 = primary air connection spigot in the centre rear of the box

14 – Primary air spigot diameter

- 0 = without primary air connection spigot (standard)
 1 = primary air connection spigot DN78
 2 = primary air connection spigot DN98
 3 = primary air connection spigot DN123

15 – Water connection position*

- W1 = water connection top left (not compatible with primary air connection spigot position -P1)
 W2 = water connection top right (not compatible with primary air connection spigot position -P2)
 W3 = water connection bottom left
 W4 = water connection bottom right
 W5 = water connection centre left side
 W6 = water connection centre right side
 W7 = water connection bottom left side
 W8 = water connection bottom right side

16 – Mounting of hydraulic regulation*

- 000 = on-site mounting (pieces are supplied loose for on-site mounting outside the room air-conditioning module)
 xyz = cooling valve x, heating valve y, actuators z are mounted ex works (standard) (not compatible with valves NW \geq 1") (for x, y and z, see table)

17 – Electric connection position*

- S1 = electric connection top left
 S2 = electric connection top right
 S3 = electric connection bottom left
 S4 = electric connection bottom right
 S5 = electric connection centre left side
 S6 = electric connection centre right side
 S7 = electric connection bottom left side
 S8 = electric connection bottom right side

18 – Additional control and regulation elements

- 0 = without additional control and regulation elements (standard)
 1 = with fault message output

19 – Condensate connection position*

- K1 = condensate connection top left (with condensate pump only)
 K2 = condensate connection top right (with condensate pump only)
 K3 = condensate connection bottom left (not compatible with a condensate pump)
 K4 = condensate connection bottom right (not compatible with condensate connection with condensate pump)
 K5 = condensate connection centre left side
 K6 = condensate connection centre right side
 K7 = condensate connection bottom left side (not compatible with a condensate pump)
 K8 = condensate connection bottom right side (not compatible with a condensate pump)

20 – Condensate pump

- 0 = without condensate pump (standard)
 1 = with condensate pump Si-10, mounted ex works (not possible if the condensate connection is located at the bottom)

ORDER CODE FOR LWZ ACCESSORIES

01	02
Type	Model
Example	
LWZ	-TR05

NOTE

Please always specify the complete order code in the order!
If details are missing from the order, the standard model will be delivered.
Any special model not included in the order code must be queried before ordering.
* = if not indicated, the order cannot be processed

EXAMPLE

LWZ-TR05

Accessories for air-water systems | Room thermostat standalone with weekly program RDG160T

ORDER DETAILS

1 – Type

LWZ = accessories for air-water systems

2 – Model

Hxyz = With device connection (x), flexible connection (y)
and free connection to the hydraulic network (z)

V6xy = 6-way ball valve xy

ARxy = rotary drives for 6-way ball valve xy

TRxy = room thermostat with weekly program xy

TKxy = room thermostat with KNX interface xy

SPECIFICATION TEXT

Plug-in room air-conditioning module for decentralised air-conditioning of rooms with high acoustic requirements, such as offices, medical practices, meeting rooms, sound and television studios for cooling and/or heating.

For installation in walls and ceilings or for in-front-of-the-wall installation.

The fan unit consists of double-sided, intake-operated, dynamically balanced, centrifugal blowers with forward directed blades and direct actuator.

The fan units are equipped with a highly efficient, electronically commutated EC motor with maintenance-free ball bearing for a long service life.

The EC fan can be activated by 2-10 V and is almost infinitely variable..

The housing and the fan wheel are made of plastic and are optimised for the lowest possible sound pressure.

The heat exchangers consist of a galvanised sheet steel frame with copper pipes and aluminium blades in 2-pipe and 4-pipe design.

Condensate pan in compliance with VDI 6022, made of stainless steel sheet, suitable for horizontal and vertical installation.

Filter efficiency ISO Coarse 30% (ISO 16890), regenerative synthetic fibre mat on a plastic frame.

Easy maintenance and filter exchange. The inspection plate is quick and easy to open by means of a removable lock.

The devices comply with the EMC requirement class C1 according to EN 61800.

Product: SCHAKO

Family: Room air-conditioning module Cultra Studioline

Cultra Studioline models

Type

Room air-conditioning module Cultra Studioline -CSL

Size

Size 1	-1
Size 2	-2
Size 3	-3

System (water register version)

2-pipe register 1 row of pipes (heating)	-R1
2-pipe register 3 rows of pipes (cooling or heating)	-R3
4-pipe register 1 and 3 rows of pipes (cooling and heating)	-L4

Total height

Total height 2500 mm	-2500
Total height xxxx mm	-xxxx

Housing colour

Housing unpainted	-0
Black housing, painted to RAL 9005	-1
White housing, painted to RAL 9010	-2
White housing, painted to RAL 9016	-3
Grey housing, painted to RAL 9006	-4

Mounting position

Mounting type vertical, sec. air grille and inspection in the room	-VR
Mounting type horizontal in the ceiling	-HO

Adjusting legs

without adjusting legs	-0
with adjusting legs	-1

Supply air diffuser

Supply air diffuser DBB-A	-D1
---------------------------	-----

Colour of the supply air diffuser

Colour of supply air diffuser: RAL 9010 white, white blades	-22
Faceplate/frame colour x, blade/nozzle colour y	-xy

Secondary air grille

Secondary air grille PAZ	-R1
--------------------------	-----

Colour of the secondary air grille

Colour of secondary air grille: RAL 9010 white	-22
Faceplate/frame colour x, blade/nozzle colour y	-xy

Sliding connection spigot for supply air diffuser and secondary air grille

Without sliding connection spigot (air diffusers in the device)	-M0
With sliding connection spigot, adjusting range: 25 to 105 mm	-M1
With sliding connection spigot, adjusting range: 75 to 205 mm	-M2

Primary air connection spigot position

Without primary air connection spigot	-P0
Primary air connection spigot on the left side of the box	-P1
Primary air connection spigot on the right side of the box	-P2
Primary air connection spigot on the top centre of the box	-P7
Primary air connection spigot in the centre rear of the box	-P9

Primary air spigot diameter

Without primary air connection spigot	-0
Spigot diameter DN78	-1
Spigot diameter DN98	-2
Spigot diameter DN123	-3

Water connection position

Water connection top left	-W1
Water connection top right	-W2
Water connection bottom left	-W3
Water connection bottom right	-W4
Water connection centre left side	-W5
Water connection centre right side	-W6
Water connection bottom left side	-W7
Water connection bottom right side	-W8

Mounting of hydraulic regulation

On-site mounting (pieces are supplied loose for on-site mounting outside the room air-conditioning module)	-000
cooling valve x, heating valve y, actuators z are mounted ex works	-xyz

Electric connection position

Electric connection top left	-S1
Electric connection top right	-S2
Electric connection bottom left	-S3
Electric connection bottom right	-S4
Electric connection centre left side	-S5
Electric connection centre right side	-S6
Electric connection bottom left side	-S7
Electric connection bottom right side	-S8

Additional control and regulation elements

Without additional control and regulation elements	-0
With fault message output	-1

Condensate connection position

Condensate connection top left	-K1
Condensate connection top right	-K2
Condensate connection bottom left	-K3
Condensate connection bottom right	-K4
Condensate connection centre left side	-K5
Condensate connection centre right side	-K6
Condensate connection bottom left side	-K7
Condensate connection bottom right side	-K8

Condensate pump

Without condensate pump	-0
With condensate pump Si-10, mounted ex works	-1

Accessories

Hydraulic connections
